

Application Modernization Design

Do you have an existing application running on-premises? Are you thinking of taking advantage of cloud?

With Zure's "Application Modernization Design" project, you'll have the necessary information to make the call, including the architecture design and budgetary estimates.

"Application Modernization Design" is followed by the Application Modernization Development for your application, and to the release of the first version.

THE PROJECT

- The design is done with 2 senior experts, and consists of two workshops
- The deliverable is split in two documents:
 - Architecture document describes the idea, key features, users and roles, design principles, ecosystem, high level architecture, technical use cases, security requirements, and the key technical Azure products used
 - Roadmap document describes the total schedule and cost estimates

THE PURPOSE

- To understand what is needed to modernize your application to the cloud
- To understand the cost and schedule of the application modernization development project
- To be able to make the call on the application modernization development project

NEXT STEPS

- Implement and release the first version of the application with Zure development services
 - Zure maximizes the return on your investment via agile and lean methods
- Modernize your DevOps with Zure DevOps assessment
 - Zure analyzes your current development and operations practices and help you to take full advantage from your cloud development
- Maintain and improve your application with Zure's continuous services
 - Zure provides expertise and the required SLAs up to 24/7 service if required
