Shortage on Demand Orders

Gain insight into potential shortages on Sales Orders in Business Central and avoid partial deliveries.
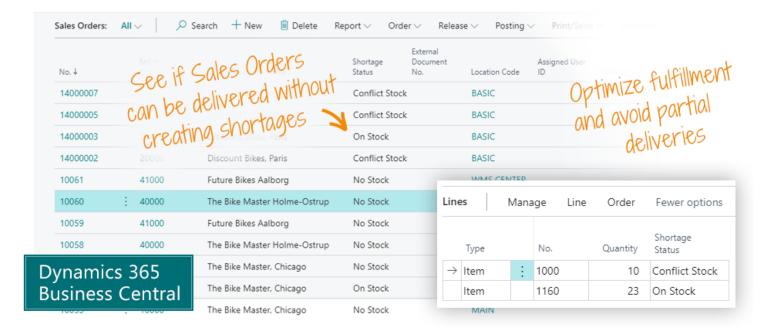

Shortage on Demand Orders helps you make intelligent decisions about which Sales Orders to prioritize when item shortages occur.

This is a planning tool for companies wanting to optimize fulfillment of Sales Orders to avoid partial deliveries by moving delivery dates and not necessarily serving customers in the order they came.

Shortage on Demand Orders provides an overview of which Sales Orders you can fulfill completely or partially – or not at all. It helps you evaluate which orders you want to pick and ship.

On the Sales Order List and on each Sales Order Line, you get a status code that shows the inventory availability. Search for all Sales Orders with the status 'On Stock', and you know that you can deliver them all without worrying about shortages.

The 'Conflict Stock' status tells you, that fulfillment is possible but will cause a shortage on another Sales Order. This way, 8 different status code provides actionable insight for picking the right Sales Orders to deliver.

See if Sales Orders can be delivered without creating shortages

Optimize fulfillment and avoid partial deliveries
