

Overview

Many businesses have adopted the work from anywhere culture, which makes it difficult for them to explain the hierarchy to new recruits. Also, the teams working from different locations need to have a document that guides them to the responsible person if they face any problem. Traditionally, organisations used to maintain an Excel to store the hierarchy information but that is again unstructured, time-consuming, requires a lot of efforts and can be ambiguous sometimes.

Maintain the details of your organization's employees in a secured cloud-based application. Exigo Tech has developed an efficient solution that allows you to view, store, modify and access the hierarchical structure of your organization from an intuitive interface.

Grab the chance to organize your workplace structure in a few minutes.

Features

Org chart by Exigo Tech is an effective solution that allows you to record your organisations' employees' details in an intuitive manner. Some of the most useful features are highlighted below -

- ★ Find the details of any employee in your organisation with their username or email through the global search feature.
- ★ Avoid getting lost in detail. Managers are highlighted in a different colour to make it easy to know which manager from a particular department you need to connect with.
- ★ Gather the required information about your employees at the ease of a few clicks by applying the required filters.

- ★ Connect and collaborate easily with your teammates as the org chart allows you to place a call or send a message over Teams on choosing the relevant option from the chart itself.
- ★ Explore the flexibility of adding details of your employees from the Microsoft Azure Active Directory.

Installation Notes

Please note that the Org Chart by **Exigo Tech** only works with **Microsoft PowerApps**. Exigo Tech provides full assistance in setting up the solution for your Microsoft tenant.

Get in touch with us today and set up an org chart for your business.
