

# MISSION CONTROL, WHERE ONE PLATFORM BRINGS EVERYONE TOGETHER. OPERATIONS MADE MORE EFFICIENT.

UNLOCK POSSIBILITIES TODAY

Airline operations are transforming and placing greater emphasis on collaboration as a key priority for the future. Developed to enhance cross-functional cooperation, SITA FOR AIRCRAFT's Mission Control app takes air-ground collaboration to the next level. By connecting day of operations teams located in the cockpit, in ops control, at the gate or on the ramp, Mission Control drives increased collaboration across teams with real-time air-ground information exchange and automated aircraft status updates. Through empowered and efficient communication made accessible to teams via desktop or mobile devices, Mission Control helps airlines better manage operational variability, turnarounds, fuel consumption and ultimately carbon emissions.
